II. Influx of Liquid and Gas Into a Well	
1. Forces Acting in an Oil Pool	65
2. Capillary (Molecular-Surface) Effects in an Oil Pool	67
3. Two- and Three-Phase Flows in an Oil Pool	73
4. Radial Type of Flow to Wells	77
5. Determining Permeability of a Collector From Commercial Data	85
6. Productivity and Yield Coefficients of Oil Wells	87
7. Interaction of Oil Wells	91
III. The Mechanism of Drainage in an Oil Pool	
1. Sources of the Pool's Energy	94
2. Conditions Governing Drainage in an Oil Pool	97
3. Conditions Governing Displacement of Oil by Water or Gas	99
4. Processes Governing Displacing of Oil by Water	100
5. Role of Capillary Forces	105
6. Elastic Expansion Effects of Liquid and Rock	106
7. Process of Expanding the Gas Cap and Gravitational Separation of Oil and Gas	111
8. Conditions Governing Exhaustion of the Pool's Internal Energy	115
9. Establishing Optimum Conditions Governing Pool Exploitation	118
10. Control and Regulation of Conditions Established for Pool Exploitation	121
IV. Maintaining Pressure in an Oil Pool	
1. Artificial Maintenance of Pressure or Creation of Conditions Favorable for Displacement of Oil	124
2. Forcing Gas Into the Gas Cap	125
3. Forcing Water Into the Pool Zones Behind the Contours	129
4. Water Supply and Principles of Water Preparation in Forcing Water Into an Oil Pool	133
5. Use of Practical Methods for Maintaining Pressure	138
V. Equations of Material Balance	
1. General Data for Calculating Material Balance of an Oil Pool	144
2. Setting up Material-Balance Equations	145
3. Use of Material-Balance Equations	147
4. Influence of Gas Extraction and Rate of Movement of Water on the Pool's Pressure Variations	151
VI. Secondary Methods for Extracting Petroleum	
1. Conditions Governing Use of Secondary Oil-Extraction Methods	154
2. Theoretical Principles Governing Flooding of an Oil Pool	158
3. Flooding Systems	162
4. Implementation of the Method in Practice	169
5. Method of Forcing Gas	172
6. Vacuum Process	180
7. Forced Separation of a Liquid	182
8. Use of Secondary Oil-Extraction Methods in Practice	184

VII. Preparing a Well for Exploitation	Page
1. Methods of Exploiting Oil Wells	189
2. Discovery of an Oil Pool by Wells	191
3. Equipment at Well Site	193
4. Design and Construction of Filters Used in Oil Wells	198
5. Gravel Filters	203
6. Flushing Wells to Draw a Flow	206
7. Exploiting Oil Wells With Help of Compressed Air or Gas	208
8. Swabbing and Bailing Oil Wells	210
VIII. Study of Wells for Inflows	
1. Purpose of Studying Wells for Inflows	216
2. Methods for Studying Wells for Inflows	217
3. Study of Wells by Methods of Tracking Levels and Pressures	219
4. Processing Study Data	226
5. Tracking the Level in Piezometric Wells	230
IX. Principles Used to Calculate Amount of Oil Extracted From a Well	
1. Potential and Optimum Yields of Wells	232
2. Setting up Technical Norms Governing Extraction From Wells	233
3. Actual Case Illustrating Simultaneous Exploitation of Two Pools by One Well	236
X. Theoretical Principles of Drawing Liquid From Wells	
1. Basic Principles	239
2. Lifting a Liquid From Wells by Hydrostatic Pressure	241
3. Lifting a Liquid by Using the Energy of Expanding Gas (General Principles)	244
4. Operation of Ideal Lifting	246
5. Characteristics of the Operation of a Lift in Practice	247
6. Experimental Unit for Studying the Movement of a Mixture in Vertical Pipes	248
7. Equation Describing the Motion of a Mixture in an Elementary Lift	251
8. Pressure Gradient Along the Length of Lift	261
9. Equation Describing the Motion of a Mixture in Long Lifts	264
10. Operation of Commercial Lifts Under Various Conditions	268
11. Analysis of Basic Relations Characterizing Lift Operations	275
XI. Gusher Exploitation of Oil Wells	
1. Theory of Gushing Wells	283
2. Conditions Governing Possibility of Well Gushing	292
3. Selection of Lift for a Gusher	296
4. Regulating and Establishing Operating Conditions for a Gusher	305
5. Investigation of Gushers	314
6. Gusher Equipment	321
7. Fittings	333
8. Separators (Traps)	337

9. Capping Equipment	340
10. Observations on Operation of Gushers	343
11. Open Gushing as an Emergency Case	346
12. Safety Engineering and Fire-Prevention Measures in Gusher Exploitation	349
 XII. Compressor Exploitation	
1. General Data	351
2. Lift Systems and Their Characteristics	352
3. Calculations of a Compressor Lift	357
4. Starting a Compressor Well and Calculating Its Starting Pressures	369
5. Methods for Reducing Starting Pressures	374
6. Starting Valves	381
7. Designing a Starting Valve Unit	388
8. Determining Operating Conditions of Compressor Wells	398
9. Study of Compressor Wells	406
10. Surface Equipment for Compressor Wells	413
11. Gas Distribution Systems	416
12. Equipping Gas-Distribution Stalls	421
13. Gas Lift and the Gas Lift Cycle	433
14. Troubles in Compressor Exploitation	438
15. Servicing the Gusher-Compressor Wells	439
16. Efficient Distribution of Gas to Wells When the Gas Supply Is Insufficient	442
17. Safety Engineering and Fire-Prevention Measures in Compressor Exploitation	446
 XIII. Periodic Exploitation of Wells With the Help of Compressed Gas	
1. Conditions Governing the Periodic Exploitation of Wells With the Help of Compressed Gas	447
2. The Plunger Lift	448
3. Calculation of the Plunger Lift	451
4. Systems of Compressor Lifts With Periodic Feed of the Working Agent	460
5. Designing Periodic Lift Installations	465
6. Automatic Devices for Periodically Feeding Gas Into the Well (Transfer Switches)	477
 XIV. The Compressor Industry	
1. Commercial Compressors	483
2. Compressor Stations	485
3. Water Economy of a Compressor Station	489
4. Exploitation of Compressor Stations	490
 XV. Exploiting Oil Wells by Deep Pumps	
1. Design and Operating Principle of Deep Well Pump	495
2. Delivery of the Deep Pump	498
3. Operation of the Pump Rod	500
4. Measurement of Rod Loads	501
5. Static Loads	506
6. Elastic Deformations of Rods Under the Action of Static Loads	507

7. Dynamic Loads	511
8. Oscillation Processes in Rods	517
9. Calculating Rod Loads	522
10. Rod Breakdowns	526
11. Construction of a Rod Column	529
12. Factors Governing Delivery of a Deep Pump	534
13. Effect of Gas on the Operation of a Deep Pump	539
14. Depth of Submersion of the Pump	542
15. Speed of Plunger Displacement	543
16. Role of Dynamometry in Evaluating the Delivery of Deep Pumps	544
17. Calculating Plunger Travel	546
18. Influence of Plunger Diameter on Delivery of Deep Pumps	553
19. Conditions Governing Selections of Plunger Size	556
20. Establishing Operating Conditions for Deep Pump	562
21. Operating Conditions in Deep Wells	566
22. Operating Conditions in Flooded Wells	575
23. Exploiting Low-Yield Wells	578
24. Control and Study of Technological Conditions of a Deep Well	581
 XVI. Deep Pumping Equipment	
1. An Ordinary Deep Pump Unit	590
2. Tubular Deep Pumps	591
3. Rod (Insert) Pumps	595
4. Deep Pump Parts	598
5. An Ordinary Series of Deep Pumps	601
6. Pump Units Without Tubing	603
7. Deep Pump Units Using Hollow Rods	606
8. Equipment for Deep Pump Method	608
9. Pump Rods	617
10. Pump Tubing	620
11. Surface Equipment for Pump Wells	623
 XVII. Drives for Deep Pumps	
1. Individual Rocker Drive	626
2. Balancing Principles of Rocking Machines	628
3. Torque on the Crankshaft and Power of an Individual Rocker	632
4. Types of Rocking Machines	633
5. Normal Series of Rocking Machines	639
6. Rocking Machines With Pneumatic Balancing	644
7. Individual Drives Without Balancers	645
8. Calculation of a Deep-Pump Unit and Selection of Rocker	647
9. Driving Several Deep Pumps From One Motor	650
10. Drive Rockers	652
11. Connecting Rods and Supports for Them	654
12. Auxiliary Equipment in the Drive System	657
13. Crankshaft Drive Mechanisms	660
14. Balancing Grouped Crankshaft Units	662
15. Centrally Grouped Drives	666
16. Balancing Grouped Drives and the Place Where They Are Set Up	671
17. Motors for Deep Pump Units	674
18. Servicing Deep Units	677
